INTERFACE VALVE

Valve Operation

MV B29AM-PL10K3W-3/8NC-3/8E-1/8P-N-L & MV B29AM-PL10K3W-1/4NC-1/4E-1/8P-N-L are 3-Way 2-Position Normally Closed, Manual/ Pilot Supply pressure Operated Interface Valves (Manual handle with control override).

To open the valve, the pressure signal to Pilot port within the required minimum pilot pressure range, the valve will actuate to open supply pressure from IN port to OUT port and block at EX port, as below Status table State 1.

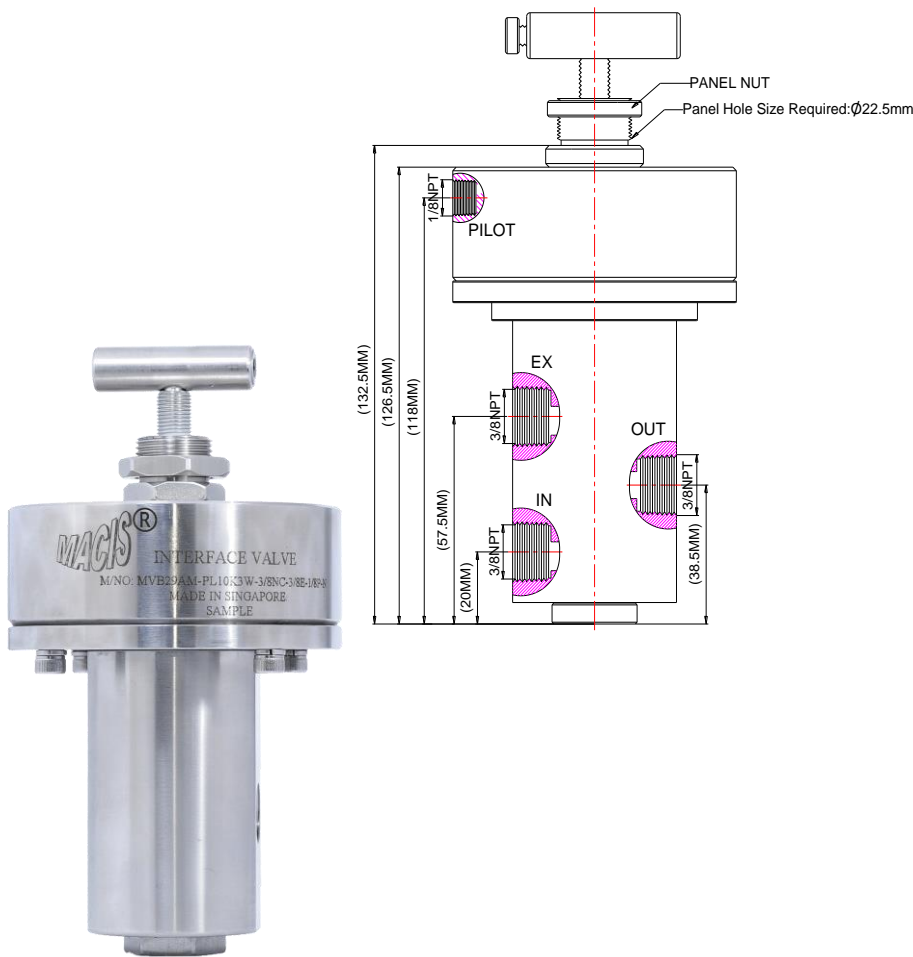

To close the valve, the Pilot port pressure lower than Min pilot operating pressure, the valve will be auto reset to close as below status table State 2. Supply pressure will be block at IN port and accumulated operating pressure will released through the EX port. Manual handle is additional function to allow the valve to be in service when loss of pilot supply.

*Note: The manual handle should be return to the normal position after pilot pressure is restored.
